

Kentucky Cardiovascular Disease Fact Sheet

CARDIOVASCULAR DISEASE MORTALITY IN KENTUCKY (Figure 1)

- Kentucky ranks 10th in cardiovascular disease death rates for 2004, behind Mississippi, Oklahoma, Alabama, Tennessee, West Virginia, Louisiana, Arkansas, District of Columbia.
- Cardiovascular disease accounted for 35% (13,707) of all deaths in Kentucky in 2004.
- The death rate for cardiovascular disease was 334.9 per 100,000 in 2004.

Cardiovascular Disease Mortality by Race Demographic (Table 1)

- In Kentucky, African Americans experienced the highest cardiovascular disease death rate in 2004.

CARDIOVASCULAR DISEASE HOSPITALIZATIONS IN KENTUCKY (Figure 2)

- Cardiovascular disease accounted for 14% (83,527) of all hospitalizations in Kentucky in 2005.
- The hospitalization rate for cardiovascular disease was 200.1 per 100,000 in 2005.

CARDIOVASCULAR DISEASE RISK FACTORS IN KENTUCKY

- 30.4% of adult Kentuckians (1 in every 3) reported no physical activity in the last month in 2006.
- 28.5% of adult Kentuckians (nearly 1 in every 3) were smokers in 2006.
- 83.2% of adult Kentuckians (4 in every 5) did not consume the daily-recommended amount of fruits and vegetables in 2005.
- 66.4% of adult Kentuckians (2 in every 3) were overweight or obese in 2006.
- 28.0% of adult Kentuckians (nearly 1 in every 3) were obese (38.4% were overweight), based on reported height and weight in 2006.
- 9.9% of the adult population in Kentucky (1 in every 10) had diabetes (2006).

Risk Factors in Kentucky Compared to the Nation

- Kentucky ranks 4th in no physical activity in the previous 30 days for 2006, behind Puerto Rico, Mississippi, and Louisiana.
- Kentucky ranks 4th in less than 5 fruits and vegetables per day for 2005, behind Puerto Rico, Oklahoma, and Mississippi.
- Kentucky ranks 11th in hypertension for 2005.
- Kentucky ranks 9th in high cholesterol for 2005.
- Kentucky ranks 7th in diabetes for 2006.
- Kentucky ranks 1st in current smoking for 2006.

CARDIOVASCULAR DISEASE COSTS IN KENTUCKY

- The economic impact of cardiovascular disease on the U.S. health care system continues to grow as the population ages. The cost of heart disease and stroke in the United States is projected to be **\$431.8 billion** in 2007, including health care expenditures and lost productivity from death and disability.
- In Kentucky, inpatient hospitalizations for all cardiovascular-related diagnoses for 2005 totaled over **\$2.2 billion**.

Figure 1. Kentucky Cardiovascular Disease Age-Adjusted Mortality Rates (per 100,000), 2000-2004

Table 1. Cardiovascular Disease Mortality by Race

	Crude	Comparison Age-Adjusted	
		2004	2000
All Kentuckians	330.9	334.9	307.5
White Male	326.8	395.3	384.1
White Female	349.4	281.8	251.8
African Am Male	277.1	495.1	436.2
African Am Female	294.9	348.8	326.8

*The **crude rate** is the total number of deaths divided by the population at risk. The **age-adjusted** death rate is the hypothetical death rate that would have occurred if the observed age-specific rates (death in each age group divided by the population of that age-group) were present in a population whose age distribution was that of a standard population. The age-adjusted rate controls for differences in age distribution among populations.

All Cardiovascular Diseases Age-Adjusted Hospitalization Rates (per 10,000), 2000-2005
